

## Update to Polysubstance Drug Panel, U. and Fentanyl Screen w/ Reflex to Confirmation, U. and Discontinuation of Fentanyl Screen, U.

Effective 8/9/23, there will be an update to the Polysubstance Drug Panel, Urine (LAB3740), performed at Champlain Toxicology Laboratory, whereby, the fentanyl screen will reflex to confirmation testing if positive. The result component will be renamed “Fentanyl Screen with Reflex to Confirmation, Urine”, and the Epic code for this component will be updated. This update will include the stand-alone orderable, Fentanyl Screen with Reflex to Confirmation, U. (LAB17585).

Fentanyl screening assays are prone to a higher than normal incidence of false positive results, and we instituted this change to optimize patient care. As a consequence, the stand-alone fentanyl screening test (LAB3585) will be discontinued. Please refer to the charts below for updated test build information.
