

Special Test Considerations

Some tests must be scheduled in advance by calling Laboratory Customer Service 847-5121 or 1-800-991-2799. For other testing, no appointment is necessary at any of the sample collection areas.

Patients are seen in the order in which they arrive. Patients with STAT (immediate need by doctors order), timed tests or patients with special needs will be seen more quickly.

Please review the Special Test Consideration table below for the most common tests that need to be collected at a particular site or scheduled in advance.

Please be aware, there may be other tests not listed here that require special consideration.

Test Name	Schedule in Advance	Collection Location
